# Logging_Module:

logging is a frame work we do same work by System.out.println but logging provide us more and more features.

Logging :- Logging is used for tacking one or more processes in application.

logging Implementation:

Logging Levels:

Importance of log messages

1. ERROR

2. WARN

3. INFO

4. DEBUG

5. TRACE

For Advance customization we use logback-spring.xml file:

we tell all configuration log which we will do here, start with

<configuration>

</appender>

define all things here

</appender>
